

Maxine Jochelson, MD is a Breast Imager who is the director of imaging at the Evelyn F. McKnight Breast and Imaging Center at Memorial Sloan Kettering Cancer Center where she is an Attending Radiologist and a Clinical Professor of Radiology at Cornell Weill Medical School.

She is a graduate of New York Medical College, completed her medical internship and radiology residency at Los Angeles County Hospital USC Medical Center. She did a clinical and research fellowship in Oncologic Radiology at the Dana Farber Cancer Institute and Brigham and Women's Hospital at Harvard Medical School.

While Dr Jochelson is involved in all aspects of breast imaging including mammography, ultrasound, MRI and intervention, she is particularly interested in new technologies to improve our ability to detect breast cancer and particularly Contrast Enhanced Mammography, a technique that uses contrast to detect contrast to find breast cancer in a fashion similar to MRI. This is a tool that may be particularly interesting in detecting invasive lobular cancers. In a similar vein she is also studying improved approaches to screening women who are at increased risk for developing breast cancer.
